

Steven Buchanan Boyle

TECH LEAD / ENGINEERING MANAGER / FOUNDER

07990 311 812 iboyleyv1@gmail.com Newcastle Upon Tyne, UK

INTRO

Engineering leader who's grown from IC to leading engineering teams, customer engagements, and influencing technical direction across projects and organisations. Delivering complex platforms across different industries while founding a developer tool. Comfortable owning the full path from architecture, to delivery, and team leadership, with a focus on agentic engineering, using AI to build and ship at pace and quality. Deeply cares for developer, end user, and agent experiences.

SKILLS

Technical

- › Core Stack: TypeScript, React, Next.js, Node.js, Python, PostgreSQL/SQL, AWS, Terraform, Vercel
- › Architecture & Practice: End to end system design, state management, infrastructure, design systems, monorepos, database and API design, rendering patterns, type-safe solutions, CI/CD, agentic engineering and multi-agent workflows with Claude Code

Leadership

- › Leads as both IC and manager by managing risk, peer support/mentorship, code reviews/pairing, and career development for internal and forward deployed engineers
- › Very comfortable operating as customer and executive-facing, translating business requirements into technical outcomes and managing multiple stakeholder expectations concurrently

EXPERIENCE

hedgehog lab / Tech Lead & Engineering Manager

JANUARY 2019 - PRESENT • Newcastle upon Tyne

Owns full-stack architecture and engineering standards across the business. Leads technical delivery for multiple products serving hundreds of thousands of users, managing both internal and forward-deployed engineering teams, and setting engineering standards that scale.

A selection of client engagements — among several delivered

| Teachmate — EdTech Startup 2025 - Present

- › Led complete architectural re-platform to new app subdomain with zero end-user impact
- › Built Gen AI features for teachers; generative slideshows, worksheets and planning tools — saving hours of lesson-prep time for teachers per week
- › Owned infrastructure, architecture and the end-to-end build of a public marketing site serving 400,000+ users
- › Implemented PayloadCMS, enabling the marketing team to publish content instantly while keeping engineering velocity high
- › Utilised Terraform heavily for provisioning production infrastructure that scales from day 0
- › Served content from the edge via CloudFront caching for double-digit millisecond response times
- › Orchestrated multiple AI coding agents in parallel to prototype and ship features at pace, quality, and scale
- › Managed delivery directly with the CTO, sequencing releases around school holiday periods and hitting tight deadlines within budget.

stack: [TypeScript, React, Next.js, Python, Django, Node, CI/CD, AWS, Azure, Terraform, PostgreSQL/SQL, Git, Claude Code, CSS, ChakraUI, Storybook]

| CMSPI — Payments Consultancy [Add dates]

- › Led the build and architecture of an internal web platform surfacing payment-optimisation opportunities to Fortune 500 companies.
- › Defined a type-safe solution end-to-end across client and server for a fast, reliable developer experience.
- › Migrated the app from a polyrepo to a monorepo architecture, unifying tooling and speeding up delivery across teams.
- › Forward-deployed directly into the client organisation, managing stakeholder expectations and shipping within sprint deadlines.
- › Partnered with payments subject-matter experts to translate complex domain rules into an intuitive internal tool.

| Deliveroo — Online food delivery [Add dates]

- › Built the supplier-facing web platform for Sourced, powered by Deliveroo alongside the frontend team — giving restaurants a single place to order supplies and giving smaller restaurants stronger buying power.
- › Shipped React features at pace, working closely with Deliveroo's teams to stay aligned with their design system and brand standards.

Helloworld Technologies Ltd / Founder (part-time)

OCTOBER 2025 – PRESENT

- › Bootstrapped the business solo and defined the company vision as sole technical founder.
 - › Built and architected gitgood.io outside working hours — a platform driving code-review engagement across distributed teams.
 - › Built a real-time PR sync engine on GitHub's API, plus a context-aware AI feedback evaluation system to incentivise high-signal code review.
 - › Designed a gamified UX system (streaks, progression, feedback loops) to drive consistent participation.
 - › Owned all technical and architectural decisions, including build-vs-buy across auth (Clerk), database (PostgreSQL/Supabase), and infra (Vercel).
- stack:** [TypeScript, React, Next.js, Node.js, Claude Code, PostgreSQL, Drizzle ORM, Vercel, Supabase, Clerk, Tailwind, ChakraUI, Octokit, v0, Lovable, Vitest, Gemini]

Lookers / Systems Developer

JUNE 2018 – JANUARY 2019 • Newcastle upon Tyne

- › Offered the role immediately prior to graduating.
 - › Supported the BI team in developing multi-dimensional databases for rapid reporting across dealerships, sales and internal products.
 - › Maintained legacy systems and CRON data feeds updating stock across third-party and brand websites.
 - › Used SQL to help stakeholders understand trends; built PoCs and rebuilt legacy PHP applications.
- stack:** [JavaScript, jQuery, MySQL, SQL, PHP, Laravel, Node, HTML, CSS, and more]

Mid-sized Software Agency / Software Developer (Internship)

2016 – 2017

- › Third-year placement supporting and maintaining a pre-tenancy software platform used by hundreds of estate agents across the UK.
 - › Built user-facing features using jQuery and Laravel/PHP while being actively mentored, and handled live support calls and bug fixes on physical production servers.
 - › First hands-on introduction to the SDLC and how servers, clients and databases work together.
- stack:** [HTML, CSS, SASS, Laravel, PHP, JavaScript, jQuery, MySQL, SQL, Git, and more]

EDUCATION

Northumbria University / BA (Hons) Computer Science (1:1)

2014 – JUNE 2018 • Newcastle upon Tyne

Graduated with first-class honours in Computer Science, covering web technologies, object-oriented programming with Java, relational databases in SQL, embedded systems with C/C++, artificial intelligence and machine learning.

Dissertation: “Symbiosis” — a web platform connecting professional experts with clients seeking domain expertise via real-time 1:1 messaging, with dashboards and analytics to gamify the experience.

HOBBIES

Big gym goer, lover of deep nature breakaways and walking trails, dystopian thrillers on Netflix, and spending time with my pooches. I write a tech blog when I get some free time and love to tinker with new technologies when I get some free time.
